

We recorded 32 tracks in one Project called "maik\_olove29052021.aup3" and closed audacity 3.0.2 on Windows 10 – after reopening audacity days later and minimizing the tracks to get a clear overview audacity crashed and I ended it by taskmanager in Windows 10.

The crash happened after clicking on "Ansicht -> Spurgröße -> an Höhe anpassen (CTRL+Shift+F)" after minimizing the tracks by hand.

After reopening audacity again after the crash the following dialog appears to recover the corrupted project:

Then it takes forever after clicking "Ausgewählte wiederherstellen" while audacity is reporting "not responding" or in german: "Keine Rückmeldung" in Windows 10.

So nearly 1 GB of recorded sound is lost.

Can I somehow recover the "maik\_olove29052021.aup3" project with other tools or tricks ?

Beste regards and thanx anyway for this great tool!
